

MANIFESTO OF ToR DAO

We hereby dedicate this to the greatest comeback of the century: the return of Trump.

President Trump, over the past 8-9 years, has endured countless lawsuits, exclusion, and suppression by establishment politicians. During this challenging period, President Trump faced significant opposition from various political figures, media organizations, academic institutions, and citizen groups. He encountered criticism and challenges from multiple directions—political, commercial, and personal. There were even extremists who attempted to assassinate him. Despite such immense challenges, President Trump achieved the following great accomplishments:

1. Restored common sense as the guiding principle in our way of life, safeguarding the people's freedom from being diminished or eroded.
2. Restored freedom of speech, reaffirming the principle that "speech that is not liked by others" still has the right to be expressed.
3. Restored the original purpose of government, reaffirming through large-scale government reforms and budget cuts the common-sense principle that "government is not a charity, nor should it have the power to shape people's beliefs and morals."
4. Reshaped the world to establish a new order that does not sacrifice American interests.
5. Initiated negotiations to acquire Greenland and started discussions on merging Canada with the United States to create a great North American nation.
6. Signed a presidential executive order making cryptocurrency a national reserve of the United States.
7. Became a freedom fighter in American history with the iconic slogan "Fight, Fight, Fight."

We believe that, based on the above achievements, President Trump deserves a statue on Mount Rushmore. Therefore, we are launching this DAO as a great experiment in the field of engineering, showcasing the power of free people and the creative and constructive spirit of capitalism.

This project will be executed by a decentralized autonomous organization (DAO) based on blockchain technology, with funding coming from voluntary supporters, marking a significant experiment for DAOs in the realm of public works. We advocate that all future public works, including government-funded projects, be executed through DAOs to ensure controllable budgets, achievable goals, and traceable spending, thereby maximizing transparency in the use of taxpayer money.

We believe that since the existence of government, the evolution of government governance has gone through the following stages:

1. Primitive government.
2. The Magna Carta in England established a government where the king is subject to the law.
3. The Glorious Revolution in England established a government where fiscal revenues are determined by the people's representatives.
4. The Founding Fathers of the United States established the principle that "government power is granted by the people, and the people hold sovereignty," overturning the default notion that "government power is natural and inherent."
5. A government where public spending is managed by DAOs to achieve maximum transparency in government expenditure.

Based on the above understanding, we believe this project is another great experiment that will undoubtedly usher in a new era—an era that truly realizes a government of the people, by the people, and for the people.
